

Swissphone DE925

The digital pager for the highest demands

The most important performance features

- > 5-line backlit full graphic LC Display with over 100 characters
- > 32 RIC, each with 4 subaddresses
- > 9 alerts/user profiles plus 1 extension
- > IP54* protection class for daily use in all weather conditions
- > longer independent battery operation thanks to ECO mode
- > Self-explanatory menu structure

Introducing the logical next step up from the DE920: the DE925. Designed to meet the needs of more demanding users still, its full graphic display ensures multiple compatibility with both 16-character and 20 or 21-character displays. The user now has the choice of displaying messages in wide 16-character format (thereby assuring consistency with Swissphone's DE900 series receivers) or with 20 characters per line. This means that the DE925 can also be used in alarm signal networks that have unified their messaging structure on the basis of 20-character display technology.

And that's not all: Swissphone has also enlarged the display from three to five lines. When a message is copied, the status line is deactivated and the space used as a fifth line for the message display. This makes a total text display size of up to 105 characters available to the user. Operating, too, has been revised and configured even more ergonomically, for full professional functionality that is intuitive and secure to operate. Guaranteed to meet the highest demands!
