

INTRODUCTION

Welcome to our latest Alfatronix Catalogue featuring all products in the portfolio. Here you will be able to find all the information you need on DC-DC converters, mains power supplies and desktops as well as PowerTector LVD battery protectors and battery chargers.

Prominent in this year's catalogue is also our brand new range of USB mobile phone and tablet chargers. These are usually installed on buses and coaches and allow passengers to charge their mobile phones and tablets as they travel. They are suitable for both 12V and 24V systems and charge at 5Vdc, thus negating the need for mains inverters in most circumstances. Over the coming months and years, you will see these increasingly installed in public transport throughout Europe.

Our DC-DC range is more extensive than ever and now offers converters from 36W to 600W and includes 24V-12V and 12V-24V configurations as well as an improved range of 12V-12V and 24V-24V stabilisers.

As well as our brick in the lead mains power supplies, our desktop range continues to be very popular and new radio configurations are added regularly, so please check for up to date information. Today, all popular radio transceivers are covered by the Alfatronix Desktop or "wedge," range, as they have become popularly known in the market.

All products are manufactured at our factory in Poole, England and are available for fast despatch, usually within a day or two. We have distributors throughout Europe and beyond for fast delivery within your local area and our engineering team is always available to assist with any issues relating to application or installation. Here at Alfatronix, we make every effort to maintain the very highest of quality standards backed by a return to base lifetime guarantee.

Whether you are involved in the communications, automotive or marine markets, are specifying original fit components at OEM level or require power conversion as part of a system integration, we have a wide range of products to suit your needs.

- ◆ Denotes non-isolated common earth products.
- Denotes isolated products. These provide isolation between input and output and are often used for marine applications or for petrochemical applications to prevent sparking. They can also help to reduce the effects of EMC interference. They can always be used in place of non-isolated products but not vice versa.
- ◆ Denotes product is also available in IP65 versions. *Please add the suffix -RU to the part number when ordering.*
- Denotes product is IP20 force air fan cooled.

Many products have an intermittent current rating, so occasional short periods above the continuous ratings are permissible. Intermittent ratings are normally 25% above the continuous ratings, though often greater on smaller units. Permissible max usage cycle is 2 minutes, followed by 8 minutes rest.

In addition to the standard products tabled, a number of wide input products are also available. These are configured to operate from both 12V and 24V systems. *For further information, please see page 10: Bespoke and Variant Options.*

Output voltages are generally set to typify normal battery output voltages as follows: 12V nominal = 13.6V, 24V nominal = 27.2V, 48V nominal = 54.4V.

Most products are available with alternative output voltage options at extra cost, for example 12V instead of 13.6V.

Most products are IP53 as standard. Many products are also available as IP65 versions. Part numbers will have -RU suffix. *Please see data sheet for clarification.*

24VDC TO 12VDC VOLTAGE CONVERTERS

These products offer a convenient way to operate mass produced 12Vdc equipment such as cell phones, in car entertainment, professional communications, telematics equipment, refrigerators, televisions etc. from the 24Vdc mobile electrical systems found on diesel engine vehicles and vessels.

A COMPREHENSIVE RANGE

There are 14 products in the range from 3A to 50A in isolated or common earth configurations. They have been optimised for high volume 24Vdc to 12Vdc applications such as on heavy goods vehicles, coaches, buses, forestry and agricultural vehicles, as well as commercial and leisure marine vehicles.

TAMPER PROOF

These units are IP53, so there are no ventilation holes to permit stray objects, dust or water droplets to enter the case, there are no external fuses to be tampered with. Fuses will only blow if there is a fault so there is no need to make them accessible.

PRODUCT VARIANTS

Many PowerVerters and DD Series products can be configured with alternative output voltages etc. for specialist applications. *Please call our sales team to discuss your requirements.*

Galvanically isolated units are suitable for marine applications and come complete with the green tamperproof label for petrochemical applications.

New PV50s, 50Amp converter

FAST INSTALLATION

All the units consume an off load current of less than 15mA, which is probably less than the self discharge current of the vehicle's battery. In most cases this can be ignored, speeding the installation by removing the need to fit a remote switch.

All products fit onto a "Click 'n' Fit" mounting clip which is fixed in three points allowing it to be mounted on uneven surfaces. It is easy to fit the clip into awkward places and then simply click the unit into position. A fixing kit for din rail installation is also available (see page 28).

A green LED indicates when there is output from the converter. This gives reassurance to the installation engineer and speeds fault finding.

Many units in the PowerVerter range are also available as IP65 Versions. *Please add the suffix -RU to the part number when ordering.*

Part Number	Cont/Int Power	Nominal Voltage	Dimensions	Weight
PV3s	3A/6A non-isolated	24Vdc input, 12Vdc output	67 x 87 x 50mm	200g
PV6s	6A/10A non-isolated	24Vdc input, 12Vdc output	89 x 87 x 50mm	250g
PV12s	12A/18A non-isolated	24Vdc input, 12Vdc output	127 x 87 x 50mm	405g
PV18s	18A/22A non-isolated	24Vdc input, 12Vdc output	167 x 87 x 50mm	605g
PV24s	24A/30A non-isolated	24Vdc input, 12Vdc output	167 x 87 x 50mm	620g
*PV50s	50A/60A non-isolated	24Vdc input, 12Vdc output	283 x 125 x 74mm	1775g
PV3i	3A/6A isolated	24Vdc input, 12Vdc output	89 x 87 x 50mm	280g
PV6i	6A/10A isolated	24Vdc input, 12Vdc output	127 x 87 x 50mm	505g
PV12i	12A/18A isolated	24Vdc input, 12Vdc output	167 x 87 x 50mm	590g
PV18i	18A/22A isolated	24Vdc input, 12Vdc output	217 x 87 x 50mm	775g
PV24i	24A isolated	24Vdc input, 12Vdc output	217 x 87 x 50mm	785g
PV3s-A	3A/6A non-isolated	24Vdc-12Vdc dual output	67 x 87 x 50mm	200g
PV6s-A	6A/10A non-isolated	24Vdc-12Vdc dual output	89 x 87 x 50mm	250g
PV12s-A	12A/18A non-isolated	24Vdc-12Vdc dual output	123 x 87 x 50mm	425g

Other input and output voltage configurations are available as special orders, please ask our sales team.

TECHNICAL DATA

Input voltage range	17-32Vdc
Output voltage	13.6Vdc +15% -20% at extremes of temperature, load, input tolerance, etc.
Intermittent output power	As stated, taken for a maximum of 2 minutes followed by 8 minutes rest
Transient voltage protection	Meets ISO7637-2 International standard for 24Vdc commercial vehicles
Electrostatic voltage protection	Meets ISO10605, ISO14982, >8kV contact, 15kV discharge
Output noise	<50mV pk-pk at continuous load. Meets CISPR25.
Off load current (quiescent current)	<15mA
Power conversion efficiency	Typically: 90% for non-isolated units, 85% for isolated units, *95%
Isolation	>400Vrms between input, output and case, on isolated products only
Mean time between failures	>162 years (HRD4)
Operating temperature	-25°C to +30°C to meet this specification table +30°C to +80°C de rate linearly to 0A
Storage temperature	-25°C to +100°C
Operating humidity	95% max., non-condensing
Casework	Anodised aluminium, glass filled polycarbonate, dust water and impact resistance to IP533
Connections	Four 6.3mm push-on flat blade connectors *(5 way Phoenix connector including enable on/off terminal and mating half)
Output indicator	Green LED adjacent to output terminals
Mounting method	Click 'n' fit mounting clip, fitted separately using three hole fixture (see page 24) * 4 hole cradle
Safe area protection:	Over current Limited by current sensing circuit Over heat Limited by temperature sensing circuit Transients Protected by filters and rugged component selection Catastrophic protection Protected by internal input and output fuses
Approvals	2004/108/EC The general EMC directive 2009/19/EC & Reg 10 The automotive directive 93/68/EEC The CE marking directive
Designed to	Reg 10, EN50498, ISO 7637-2, ISO 11452-1, ISO 14892, EN12895, ISO TR10605, EN60945, EN55022, FCC15B.
Markings	CE and E marked

FOR MOBILES AND TABLETS - THE SAFE ALTERNATIVE FOR ON BOARD POWER

The widespread use of smartphones and computer tablets has created an increasing need for user accessible, on the move charging systems. The PowerVerter USB Chargers can be easily installed onto any vehicle and allow both drivers and passengers to readily access power to charge any device connected via a USB lead.

This type of system has the distinct advantage of largely negating the need for mains electricity on vehicles. The 5Volt DC power is much safer than mains, so installation is quick and simple. Passengers can access the charging facility directly and power their equipment simply through the USB charging lead which is supplied with all such products.

All versions in the range can be connected directly to both 12Vdc and 24Vdc systems without adjustment. The advanced electronic design will also automatically detect if the device is an Apple or Android configuration and alter the charging process accordingly. This ensures that whatever device is connected, be it Apple, Android, iPad, phone or tablet, it will always be charged as fully as time and capacity allow.

THE RANGE

The PowerVerter USB chargers are available with either single or double outputs. The USB1 design is ideal for installation in dashboards, fascia displays or underneath bus seats and is retained from behind with the threaded securing ring provided. The USB3 design offers a slimline alternative and requires only 20mm rear space. This version is ideal for installation into seat backs, armrests or wherever space is an issue. Where rear access is limited, a front fixing retaining plate is supplied as an alternative. A protective installation pod is also available. This will accept both single and double USB chargers and is ideal for under seat installations on buses and coaches as well as retrofit applications where the vehicle is already in service.

WARRANTY

Like all products, the USB chargers are manufactured using rugged components to provide years of service in demanding commercial environments. Due to the limitations of public use, the guarantee on these products is limited to three years.

COMMERCIAL INSTALLATIONS

The PowerVerter USB chargers offer an advanced design that effectively counteracts the voltage drop common when output currents vary as different devices charge at different rates. This avoids the common problem of the phone or tablet indicating it is charging when in fact very little current is being supplied. They also have an exceptionally low quiescent current of less than 2mA meaning that multiple devices can safely be installed throughout buses and coaches without materially discharging the battery.

They have been designed to meet the rigorous standards required for on board commercial vehicle applications including BS EN50498 and ISO 7637-2 and are both CE and E marked. The casings are made from V0 rated (self-extinguishing) high impact polycarbonate and the electronic assembly is predominantly by computer controlled SMT for maximum reliability.

All versions have a subtle blue LED light to highlight their location on the vehicle.

- 12Vdc and 24Vdc systems
- Up to 2.1A output (single) 3.0A (double - max 1.5A per socket)
- Apple and Android auto-detect
- Dashboard, slim-line seat back or underseat pod configurations
- LED output indicator
- CE and E Marked

PowerVerter USB - available in both single and double outputs

Slim line version for where rear space is limited.

Retaining plate for when rear access is limited

Protective pod for under seat or retrofit installation. Can be supplied with charger, pod & wiring ready assembled.

Part Number	Description	Dimensions (mm)	Weight
PV-USB1	Single output 12/24-5V USB Charger 2.1A	Diameter 36; Hole 30; Depth 55	30g
PV-USB1-DUAL	Double output 12/24-5V USB Charger 3.0A	Diameter 36; Hole 30; Depth 55	40g
PV-USB3	Single output slimline 12/24-5V USB Charger 2.1A	Diameter 36; Hole 30; Depth 20	55g
PV-USB3-DUAL	Double output slimline 12/24-5V USB Charger 3.0A	Diameter 36; Hole 30; Depth 20	60g
PV-USB-POD	Mounting pod for USB Chargers	Width 60; Height 52; Depth 80	55g
PV-USB-H1	Standard 1.4m wiring with inline 2A fuse	1 x Red 1.4m, 1 x Black 1.4m	50g

TECHNICAL DATA

Input voltage range	9-32Vdc
Output voltage	5Vdc +/- 0.1V
Output Power	2.1A (single) 3.0A (double - max 1.5A per socket)
Application	Charges all USB devices including Apple and Android
Transient voltage protection	Meets ISO7637-2 International standard for 12/24V vehicles
Output noise	<50mV pk-pk
Off load current (quiescent current)	<1.7mA
Power conversion efficiency	86%
Operating temperature	-25°C to +30°C to meet this specification table
Storage temperature	-25°C to +100°C
Operating humidity	95% max., non-condensing
Casework	Black polycarbonate body
Connections	Input: 6.3mm push-in flat blade connectors Output: USB type A single socket/double socket
Output indicator	Blue LED output indication
Mounting method	30mm diameter hole with or without bezel
Safe area protection:	<ul style="list-style-type: none"> Over Current: Limited by current sensing circuit Over heat: Limited by temperature sensing circuit Overvoltage and Undervoltage: Limited by sensing circuit Reverse Polarity: Limited by sensing circuit Transients: Protected by filters and rugged component selection Catastrophic protection: Internal fuse
Approvals	2004/108/EC The general EMC directive Regulation 10 The automotive directive 93/68/EEC The CE marking directive AESP5
Designed to	EN50498, ISO 7637-2
Markings	CE and E marked
IP Rating:	IP30

12V-12V, 24V-24V & 48V-12V CONVERTERS FOR A WIDE RANGE OF APPLICATIONS

The sensitivities of modern electronic equipment to variable input voltages, susceptibility to EMC interference and in some cases, the need to isolate the supply has made voltage stabilisation an important section of our product range. Start/Stop technology on motor vehicles has added to this problem. The DDi Series offers a wide range of 12V-12V and 24V-24V isolated products that ensure a stable and reliable voltage can be delivered to important equipment, even when the electrical system is under duress, such as during engine cranking. Units are available from 36-240W. The range now also offers 48V-12V units, suitable for the telecoms and forklift truck markets. *For 12V-24V converters, see DD Series 'Up' Voltage Converters*

A COMPREHENSIVE PRODUCT RANGE

There are three products in the 12V-12V isolator range from 36W to 108W and a further four products in the 24V-24V range from 72W to 240W. There are also three 48V-12V products from 36W to 108W. All products use modern switchmode designs and are built using the same concepts and technologies as the successful PowerVerter range, which will of course meet your 24V-12V requirements.

FAST INSTALLATION

All the units consume an off load current of less than 15mA, which is probably less than the self discharge current of the vehicle's battery.

All the products fit onto a "Click 'n' fit" mounting clip which is fixed in three points allowing it to be mounted onto uneven surfaces. It is easy to fit the clip into awkward places, then simply click the unit into position.

The green LED indicates when there is output from the converter. This gives reassurance to the installation engineer and speeds fault finding.

PRODUCT CODING

The product code is developed as follows, taking the DDi 12-12 036 as an example:

DD	DC input and output
i	Denotes isolated converter
12-12	Nominal 12V input/output
036	36W capacity unit

12V-12V and 24V-24V units can provide a stable output voltage as well as providing galvanic isolation for a variety of applications

Part Number	Power	Nominal Voltage	Dimensions	Weight
DDi12-12 036	36W (3A) Isolated	12Vdc input, 12Vdc output	89 x 87 x 50mm	280g
DDi12-12 072	72W (6A) Isolated	12Vdc input, 12Vdc output	167 x 87 x 50mm	540g
DDi12-12 108	108W (9A) Isolated	12Vdc input, 12Vdc output	217 x 87 x 50mm	780g
DDi24-24 072	72W (3A) Isolated	24Vdc input, 24Vdc output	127 x 87 x 50mm	440g
DDi24-24 108	108W (4.5A) Isolated	24Vdc input, 24Vdc output	167 x 87 x 50mm	540g
DDi24-24 168	168W (7A) Isolated	24Vdc input, 24Vdc output	217 x 87 x 50mm	780g
DDi24-24 240	240W (10A) Isolated	24Vdc input, 24Vdc output	217 x 87 x 62mm	870g
DD48-12 072	72W (6A) Non-Isolated	48Vdc input, 12Vdc output	89 x 87 x 50mm	270g
DD48-12 108	108W (9A) Non-Isolated	48Vdc input, 12Vdc output	127 x 87 x 50mm	370g
DD48-12 240	240W (20A) Non-Isolated	48Vdc input, 12Vdc output	217 x 87 x 50mm	770g
DDi48-12 036	36W (3A) Isolated	48Vdc input, 12Vdc output	89 x 87 x 50mm	290g
DDi48-12 072	72W (6A) Isolated	48Vdc input, 12Vdc output	127 x 87 x 50mm	405g
DDi48-12 108	108W (9A) Isolated	48Vdc input, 12Vdc output	167 x 87 x 50mm	560g

Other input and output voltage configurations are available as special orders, please ask our sales team.

For DIN Rail Mounting - see page 28.

TECHNICAL DATA

Input voltage range	12Vdc, 24Vdc or 48Vdc +/- 30%
Output voltage	13.6Vdc or 27.2Vdc +15% -20% at extremes of temperature, load, input tolerance etc
Intermittent output power	Continuous rating +25% taken for a maximum of 2 minutes followed by 8 minutes rest
Transient voltage protection	Meets ISO7637-2 International standard for 24Vdc commercial vehicles
Electrostatic voltage protection	Meets ISO10605, ISO14982, >8kV contact, 15kV discharge
Output noise	<50mV pk-pk (100mV on 24V units) at continuous load. Meets CISPR25.
Off load current (quiescent current)	<15mA
Power conversion efficiency	Typically: 90% for non-isolated units, 85% for isolated units
Isolation	>400Vrms between input, output and case, on isolated products only
Mean time between failures	>162 years (HRD4)
Operating temperature	-25°C to +30°C to meet this specification table +30°C to +80°C de rate linearly to OA
Storage temperature	-25°C to +100°C
Operating humidity	95% max., non-condensing
Casework	Anodised aluminium, glass filled polycarbonate, dust water and impact resistance to IP533 (excludes DDi 24-24 240 which is ventilated and fitted with a cooling fan to IP20).
Connections	Four 6.3mm push-on flat blade connectors
Output indicator	Green LED adjacent to output terminals
Mounting method	Click 'n' fit mounting clip, fitted separately using three hole fixture
Safe area protection:	Over current Limited by current sensing circuit Over heat Limited by temperature sensing circuit Transients Protected by filters and rugged component selection Catastrophic failure Protected by internal input and output fuses
Approvals	2004/108/EC The general EMC directive 2009/19/EC The automotive directive 93/68/EEC The CE marking directive
Designed to	EN50498, ISO 7637-2.
Markings	CE and E (e) marked

12V-24V "UP" CONVERTERS FOR A WIDE RANGE OF APPLICATIONS

If you need to fit 24V equipment onto a 12V electrical system, then an "up" converter from the DD Series offers a fast and easy way to configure your system. Now with a range from 72W (3A output) to 600W (25A output), these products offer state of the art designs for fast installation and long term reliable operation. Typical applications include the installation of 24V equipment on 12V vehicles and installation of specialist equipment requiring higher operating voltages.

400W AND 600W 12-24V UNITS

The latest addition to the range includes two high current (17 and 25 Amps output) units. These use state of the art designs with efficiency up to 93% and practically all components are mounted using computer controlled surface mount technology (SMT). The result is a robust product with low component mass. The mechanical aspects include a brand new casing profile designed for maximum heat dissipation as well as a new design of our highly successful mounting cradle that allows the unit to be fully wired before being "clicked" into place. This provides for a faster installation time with mechanics capable of withstanding long term vibration with no risk of screws falling out.

CASING FORMATS

12V-24V converters are available in two casing formats. Units from 72-240W use the standard Alfatronix aluminium casings with polycarbonate endcaps and three point mounting cradle. The larger 400W and 600W units occupy a larger heatsink casing and utilise the heavy duty Phoenix connector. Installation is by way of the larger four point 'I' shaped mounting cradle.

ALSO AVAILABLE IN IP65 FORMAT

The DD Series 12-24V products are available in either standard IP53 format (like most Alfatronix converters) or the ruggedised IP65 versions. Just add -RU to the part number. These are suitable where the installation is in a particularly hostile environment and subject to increased water and dirt exposure.

PRODUCT CODING

The product code is derived as follows, taking the DD 12-24 072-RU as an example:

DD	DC input and output
12-24	Denotes 12V input, 24V output
072	Denotes wattage
-RU	Denotes IP65 version

Part Number	Power	Nominal Voltage	Dimensions	Weight
DD12-24 072	72W (3A) Non-Isolated	12Vdc input, 24Vdc output	89 x 87 x 50mm	300g
DD12-24 168	168W (7A) Non-Isolated	12Vdc input, 24Vdc output	167 x 87 x 50mm	640g
DD12-24 240	240W (10A) Non-Isolated	12Vdc input, 24Vdc output	217 x 87 x 50mm	800g
DD12-24 400	400W (16A) Non-Isolated	12Vdc input, 24Vdc output	233 x 125 x 74mm	1510g
DD12-24 600	600W (25A) Non-Isolated	12Vdc input, 24Vdc output	283 x 125 x 74mm	1800g

Other output voltage configurations are available as special orders, please ask our sales team

TECHNICAL DATA

Input voltage range	12Vdc +/- 30%
Output voltage	27.2Vdc +/-5% at extremes of temperature, load, input tolerance etc
Continuous current rating	3A - 25A depending on model
Intermittent rating	Continuous rating +20%, taken for a maximum of 2 minutes followed by 8 minutes rest
Transient voltage protection	Meets ISO7637-2 International standard for 12V and 24Vdc commercial vehicles
Electrostatic voltage protection	Meets ISO10605
Output noise	<100mV pk-pk at continuous load
Off load current (quiescent current)	<20mA (400W and 600W enable off), less than 100mA (72 - 240W units)
Power conversion efficiency	Typically 93%
Operating temperature	-25°C to +30°C to meet this specification table +30°C to +80°C de rate linearly to 0A
Storage temperature	-25°C to +70°C
Operating humidity	95% max., non-condensing
Casework	Anodised aluminium, glass-filled polycarbonate, dust, water and impact resistance to IP53. Ruggedised versions also available to IP65.
Connections	Four 6.3mm push on flat blade connectors (72W - 240W) Five terminal connector with screw tightening with mating half supplied (400W and 600W units)
Output indicator	Green LED adjacent to output terminals
Mounting method	"Click 'n' fit" mounting clip, fitted separately using 3 hole fixing (4 hole on 400W and 600W)
Safe area protection:	Over current Limited by current sensing circuit Over heat Limited by temperature sensing circuit Transients Protected by filters and rugged component selection
Input/Output over voltage protection	Controlled by internal circuitry
Catastrophic failure	Protected by internal input and output fuses
Approvals	2004/108/EC The general EMC directive 2009/19/EC The automotive directive 93/68/EEC The CE marking directive
Designed to	EN50498, ISO 7637-2
Markings	CE and E/e marked

FROM 9V TO 110V DC INPUT WITH A RANGE OF OUTPUTS TO SUIT YOUR NEEDS

From our comprehensive range of DC-DC converters, we can design bespoke solutions to your power needs. Input voltages from 9Vdc - 110Vdc are available with output voltages set to suit your needs. Products can also be upgraded, for example, to higher IP ratings or for high temperature performance. With specialist engineering skills in Switchmode DC-DC power conversion, we can undertake complete bespoke design projects to suit your requirements.

- A variety of mounting methods are available including the Alfatronix Click 'n' Fit system.
- Like all Alfatronix products, the variant units are covered by our No Quibble Lifetime Warranty.

RECENT EXAMPLES

- Wide input (11V-32V) unit with 10V output to power GPS systems on waste disposal trucks.
- Wide input (9V-32V) unit with 9V output to power thermal printers.
- Wide input (9V-32V) unit with 5V output for data logging systems on buses.
- Wide input (9V-32V) unit for motorway information signs.

Power solutions for forklift trucks, combine harvesters, trams and other specialist vehicles can all be served, as well as a variety of general industrial applications.

DC-DC VOLTAGE CONVERTERS

For annual volumes of over 10,000 units, Alfatronix can offer a bespoke design solution for OEM customers wishing to integrate DC-DC conversion into their vehicle electronics assembly. This enables the use of dedicated connectors and package dimensions to suit vehicle drawings and offers the opportunity to maximise performance within a given power conversion application.

Operating at the forefront of technology in DC-DC conversion, our engineers can offer advanced technological solutions with unparalleled reliability and performance. Features and benefits can be designed in line with dedicated needs to optimise benefits in assembly.

Some of the latest electronic designs can be assembled entirely using robotic Surface Mount Technology (SMT) providing excellent build repeatability. Quality is controlled entirely by process and the high capacity automated production equipment means assembly costs can be competitive against low cost off shore locations. Using these methods Alfatronix can maximise price to performance ratios while offering outstanding supply chain efficiency.

Please contact our sales team for more information.

DC-DC INTELLIGENT BATTERY CHARGERS

While many applications can be supplied using a standard voltage converter or stabiliser, sometimes there can be a requirement to charge one DC battery from another in order to provide independent power. The Alfatronix range of DC-DC chargers are based on the very successful PowerVerter range but configured to offer a four stage charging program that will ensure that batteries are charged to a maximum capacity providing long term reliable power.

These products come with many of the same safety and protection features as the PowerVerter, but are also additionally designed to detect faulty batteries and dead cells. They will also ensure that they will not operate unless the source battery is attached to a charging source such as a vehicle alternator or mains unit. In this way, you can ensure that the charger will not allow unintentional draining of the source battery.

MANY KEY FEATURES

These intelligent battery chargers operate a four stage charging cycle. The first stage monitors the battery to establish that the battery is in good condition before starting the three stage process. This feature is of key importance in ensuring that faulty batteries are not inadvertently charged causing overheating and potential system failure. The units are also reverse polarity protected and when re-connected correctly will operate normally without reset. The Alfatronix three point mounting cradle is also supplied for fast and easy installation.

- These intelligent DC-DC battery chargers offer a comprehensive 4 stage charging programme as well as protection against battery source drainage. A fifth terminal is also available to allow the unit to be installed as a float-mode charger if required as an alternative.
- All the battery chargers are galvanically isolated so can be used on any application including automotive, marine, petrochemical or off road applications.
- DC-DC chargers are suitable for providing auxiliary power on a wide variety of vehicles including fire, police and ambulance, as well as farming, forestry, commercial and leisure marine.

Part Number	Cont/Int Power	Input Voltage	Dimensions	Weight
ICI24-12 144	12A Isolated	24Vdc input, 12Vdc output (variable charge voltage)	167 x 87 x 50mm	600g
ICI24-24 144	6A Isolated	24Vdc input, 24Vdc output (variable charge voltage)	167 x 87 x 50mm	600g
ICI12-12 072	6A Isolated	12Vdc input, 12Vdc output (variable charge voltage)	167 x 87 x 50mm	600g
ICI12-24 072	3A Isolated	12Vdc input, 24Vdc output (variable charge voltage)	167 x 87 x 50mm	600g

For AC-DC Battery Chargers, please see our IC Series AC-DC Intelligent Battery Chargers on page 24

TECHNICAL DATA

Input voltage range	24-32Vdc, 12-16Vdc. Configured to prevent depletion of source battery.								
Output voltage	12V or 24V nominal through the intelligent battery charging curve. Please see charge graph for further information.								
Transient voltage protection	Meets ISO7637-2 International standard for 24Vdc commercial vehicles								
Electrostatic voltage protection	Meets ISO10605, ISO14982, >8kV contact, 15kV discharge								
Output noise	<50mV pk-pk (100mV on 24V units) at continuous load. Meets CISPR25.								
Off load current (quiescent current)	Typically <5mA. Unit will shut down when source battery is not being charged.								
Power conversion efficiency	Typically 85%								
Isolation	>400Vrms between input, output and case, on isolated products only								
Operating temperature	-25°C to +30°C to meet this specification table +30°C to +80°C de rate linearly to OA								
Storage temperature	-25°C to +100°C								
Operating humidity	95% max., non-condensing								
Casework	Anodised aluminium, glass-filled polycarbonate, dust, water and impact resistance to IP533								
Connections	Five 6.3mm push-on flat blade connectors								
Output indicator	Multicolour LED adjacent to output terminals indicating power and charging mode								
Mounting method	"Click 'n' fit" mounting clip, fitted separately using three hole fixing								
Safe area protection:	<table border="0"> <tr> <td>Over current</td> <td>Limited by current sensing circuit</td> </tr> <tr> <td>Over heat</td> <td>Limited by temperature sensing circuit</td> </tr> <tr> <td>Transients</td> <td>Protected by filters and rugged component selection</td> </tr> <tr> <td>Catastrophic failure</td> <td>Protected by internal input and output fuses</td> </tr> </table>	Over current	Limited by current sensing circuit	Over heat	Limited by temperature sensing circuit	Transients	Protected by filters and rugged component selection	Catastrophic failure	Protected by internal input and output fuses
Over current	Limited by current sensing circuit								
Over heat	Limited by temperature sensing circuit								
Transients	Protected by filters and rugged component selection								
Catastrophic failure	Protected by internal input and output fuses								
Approvals	2004/108/EC The general EMC directive 2006/96/EC Regulation 10 The automotive directive 93/68/EEC The CE marking directive								
Designed to	EN50498, EN55022, ISO 7637-2, EN61204-3								
Markings	CE and E marked								

SOLID STATE BATTERY GUARDS

The PowerTector Battery Guard is a solid state battery device that will monitor the source voltage and disconnect the equipment from the battery if the voltage falls below a pre-determined level. This can work to ensure that there is always sufficient voltage remaining in the battery to start a vehicle engine or ensure power is available for other critical applications. The total discharge of a lead acid battery can also cause damage to the cells significantly shortening the life of the battery. The PowerTector unit can also be set to disconnect equipment at a lower voltage that will still protect the battery from total discharge, while allowing for maximum battery usage. A timed version is also available which will disconnect automatically a set period after the ignition has been switched off.

- All PowerTectors from 40A upwards are mounted in a rugged die cast aluminium casing with glass filled polycarbonate cover providing terminal protection and insulation.
- Smaller units; 10A and 20A, are available in a lightweight, polycarbonate casing that can be simply fitted in the wiring, like an inline fuse without the need to drill the vehicle chassis.

A WIDE RANGE OF FEATURES

There are six units in the range from 10A to 200A. The 10A and 20A unit offer a simple inline system, usually wired to a specific piece of equipment. These units do not require chassis mounting and simply connect and tie wrap neatly within the wiring system.

The 40A and 60A units are connected by M6 brass bolts, the 100A and 200A by M10 brass bolts and use a three point mounting system to avoid rocking or stress to the electronics when mounted on uneven surfaces. Heat is dissipated into our custom manufactured die cast casing and all units will operate at full power without additional heatsink dissipation.

MANUAL SHUTDOWN FACILITY

From 40A upwards, the units have the facility to be manually shutdown either through the ignition or a dedicated switch. In addition, from 100A upwards the units can have an override switch fitted. This allows the units to be reactivated for four minutes to allow emergency actions to be performed.

ALARM & DISCONNECT DELAY FEATURE

An alarm output is supplied which, once the threshold has been reached for 10 seconds, will activate, sounding an alarm or other indicating device for a further 50 seconds prior to disconnection. This allows the operator to restart the engine or take other action to maintain continuous power.

TIMED VERSIONS

In addition to the standard PowerTectors, the PT-T versions offer a timed facility. This will disconnect the output after a set time after the ignition has been turned off. If required, during this time period, the voltage can still be monitored and disconnected if it falls below a set level to protect the battery power and system. The unit will reactivate when the ignition has been turned on again and the battery voltage has reached 8.5Vdc (12V systems), 17Vdc (24V systems).

FULLY PROGRAMMABLE

All units in the range are supplied pre-programmed for a variety of scenarios offering higher or lower disconnect voltages and it is quick and simple to select the correct programme to suit your needs.

- Using the simple programming terminal, select the pre-set disconnect voltage according to your requirements.
- LED indicates operational status.
- Audible alarm and/or visual indicator can be installed in the dashboard or cockpit to alert operator of a potential problem.
- Switch terminal allows the unit to be operated via the ignition or a manual switch.
- The PowerTector battery guards offer excellent protection for communication and other mission critical applications

Part Number	Power	Input Voltage	Dimensions	Weight
PT10	10A continuous	9Vdc-32Vdc (Automatic Referencing)	155 x 30 x 15mm	45g
PT10-T	10A continuous	9Vdc-32Vdc (Auto Ref) Timed	155 x 30 x 15mm	45g
PT20	20A continuous	9Vdc-32Vdc (Automatic Referencing)	155 x 30 x 15mm	45g
PT20-T	20A continuous	9Vdc-32Vdc (Auto Ref) Timed	155 x 30 x 15mm	45g
PT40	40A continuous	9Vdc-32Vdc (Automatic Referencing)	76 x 78 x 33mm	155g

PT60-T	60A continuous	9Vdc-32Vdc (Auto Ref) Timed	76 x 78 x 33mm	155g
PT100	100A continuous	9Vdc-32Vdc (Automatic Referencing)	124 x 97 x 51mm	530g
PT100-T	100A continuous	9Vdc-32Vdc (Auto Ref) Timed	124 x 97 x 51mm	530g
PT200	200A continuous	9Vdc-32Vdc (Automatic Referencing)	124 x 97 x 51mm	530g
PT200-T	200A continuous	9Vdc-32Vdc (Auto Ref) Timed	124 x 97 x 51mm	530g

TECHNICAL DATA

Input voltage range	9-32Vdc (Automatic Referencing)	
Output voltage	Equal to input voltage when operating (maximum of 100mV drop across terminals)	
Transient over current rating (% of continuous value)	110% for 10s 200% for 1s 300% for <0.5ms On over current shutdown there is a retry every 30s	
Quiescent current when shutdown (while running)	Typ 2mA @ 13.6V, (PT40/60 Typ 4mA @ 13.6V), (PT100/200 Typ 6mA @ 13.6V)	
Isolation	>400Vrms between input, output and case	
Transient voltage protection	Meets ISO7637-2 International standard for 24V vehicles	
Electrostatic voltage protection	Meets ISO10605, ISO14982, >8kV contact, 15kV discharge	
Operating temperature	-25°C to +60°C to meet this specification table	
Storage temperature	-25°C to +100°C	
Ingress protection	IP65	
Casework	Silver anodised aluminium, glass filled polycarbonate	
Connections	PT10/20 Insulated 6.3mm push-on flat blade connectors PT40/60 M6 ring tongues PT100/200 M10 ring tongues 6.3mm push-in flat blade connectors for earth, switch, override and alarm Programming lead with 2.8mm blade connector provided	
Output indicator	Green LED for programming and output indication	
Mounting method	PT10/20 tie wrap to wiring (supplied) PT40/60/100/200 3off half inch No8 pozi pan head screws (supplied)	
Safe area protection:	Over current	Limited by current sensing circuit
	Over heat	Limited by temperature sensing circuit
	Transients	Protected by filters and rugged component selection
	Catastrophic protection	Set by external input fuse (set by application demands) and ground line fuse max 1A
Approvals	2004/108/EC The general EMC directive Regulation 10 The automotive directive 93/68/EEC The CE marking directive AESP5	
Designed to	EN50498, ISO 7637-2	
Markings	CE and E marked	

MAINS POWER SUPPLIES IN 12V, 24V & 48V CONFIGURATIONS

The AD Series units may be used to supply mobile radios and other appliances from AC mains used in offices, portable site cabins, communication cabins, telephone exchanges, remote antennae sites, ships, oil rigs etc. The units will accept either European 230Vac or US 115Vac inputs and are available as standard in 12V, 24V and 48V output configurations. Input is via a standard IEC-320 C13/14 power cord with UK, European or US mains plugs - *please state your requirement.*

AD Series Power supplies can also be fitted with DIN rail clips for rack mounted applications: see page 28.

FAST INSTALLATION

There's nothing worse than a power supply lying around on the floor. The T-shaped mounting clip, common to many Alfatronix products, allows the power supplies to be installed quickly and simply in many out of the way locations, such as underneath desks or on walls. The 3 point 'T' clip can be fitted securely, even on uneven surfaces, quickly and simply, and then the power supply simply 'clips' in place.

BATTERY CHARGING REQUIRED?

A fixed voltage battery charging facility is also available with the supplementary loom; P/N AD BB Loom. For dedicated battery charging units, *please check out our IC Series Intelligent Battery Chargers (page 24).*

FULL CIRCUIT PROTECTION

The AD Series supplies have transient, overload and overheat protection for reliable operation even in the toughest environments.

RUGGED AND COMPACT

These units, often referred to as 'brick in the lead' supplies are housed in a rugged, corrosion resistant anodised aluminium extrusion. The low mass surface mount technology components offer excellent resistance to shock and vibration, thus further increasing the reliability of these products.

A green LED indicates when there is output from the converter. This gives reassurance to the installation engineer and speeds fault finding.

DESKTOP VERSIONS ALSO AVAILABLE

While the brick power supplies offer a versatile solution, if you are powering a mobile radio, try our *Desktop Versions (page 20)*. These are configured to attach to the radio forming one dedicated unit and are available for a variety of radios including Motorola, Hytera, Tait, Kenwood, Icom, Maxon and Vertex.

PRODUCT CODING

The product code is derived as follows, taking the AD 115/230-12 108 as an example:

AD	AC input and DC output
115/230	Denotes auto select US or European AC input voltage
-12	Nominal 12Vdc output
108	108W capacity unit

Product Codes	Output Voltage			Power	Dimensions	Weight
	12Vdc	24Vdc	48Vdc			
AD 115/230-12 036	AD 115/230-24 036	AD 115/230-48 036	36W	174 x 87 x 62mm	675g	
AD 115/230-12 072	AD 115/230-24 072	AD 115/230-48 072	72W	174 x 87 x 62mm	675g	
AD 115/230-12 108	AD 115/230-24 108	AD 115/230-48 108	108W	174 x 87 x 62mm	675g	
AD 115/230-12 168	AD 115/230-24 168	AD 115/230-48 168	168W	225 x 87 x 62mm	900g	
AD 115/230-12 240	AD 115/230-24 240	AD 115/230-48 240	240W	264 x 87 x 62mm	1150g	
Additional Loom for battery charging - P/N: AD BB Loom

Markings	CE								

DESKTOP POWER SUPPLIES

The desktop power supplies, popularly called the "wedge" due to its distinctive, ergonomically friendly shape, offer a convenient way to convert 12Vdc mobile radio transceivers for use as desktop base stations. They will operate from AC supplies, either 115V or 230V without manual adjustment and output up to 108W (9Amps).

Radio Transceiver + Alfatronix Desktop Power Supply + Alfatronix Battery Back Up Box

- We started making these for Motorola radios 12 years ago, now we have 24 varieties for 9 manufacturers.
- The desktop units are supplied with endplates configured to fit with your radio - see complete list on page 22.
- For a complete system, order our fully compatible battery back up box - P/N AD BBB (to include a 7Ah battery) or AD BBB NB (excluding the battery).

BATTERY BACK UP BOX

The AD Series Desktop Power Supplies include a battery back up output as standard. This can be connected to maintain charge in a lead acid battery to supply power in the event of a mains failure. As a neat alternative to a loose battery, Alfatronix also supply a battery back up box, P/N AD BBB. This is designed to fit underneath the desktop supply and radio assembly and includes a 7Ah lead acid gel battery, presenting all three components as one tidy desktop assembly.

The battery back up box also includes a speaker (mounted on the front of the unit) for those wishing to use hands free radio operation.

CAN'T FIND WHAT YOU'RE LOOKING FOR?

Alfatronix Desktop "wedge" power supplies are configured to suit a wide range of radio transceivers from many manufacturers - see list on Page 22. However, if you use a variety of radio

not listed, or cannot find a compatible unit, try our UNIVERSAL unit (P/N AD UN UNI). This uses a mechanical interlocking fixing system (3M "Dual Lock") to fix the transceiver securely to the power supply.

PRODUCT CODING

The product codes are developed to be as intuitive as possible. Taking the Motorola AD MT CM as an example:

AD	AC input & DC output
MT	Denotes the radio manufacturer, in this case Motorola
CM	Denotes a popular radio compatible with this unit

Please note: Like most part numbers, the CM fits a range of radios, not just the CM. See page 22 for a complete list.

BATTERY CHARGING CURVE

TECHNICAL DATA

The Alfatronix range of Desktop Power Supplies provide bespoke solutions for radios from a wide range of manufacturers. For any not listed the *AD UNI* version can be used with any radio.

INTELLIGENT BATTERY CHARGERS

The IC Series Intelligent Battery Chargers offer an ideal way of charging any type of lead acid battery safely and reliably. The rugged, fully protected unit (IP65) can be used in a variety of applications including on trucks, off road vehicles, boats, caravans and in depots and workshops.

A WIDE RANGE OF PRODUCTS

There are four products in the range, all accepting the standard European 230Vac inputs. The products are available for charging either 12Vdc or 24Vdc systems. They use the latest manufacturing techniques and are cool running with high efficiency. Like the other products in our range, they use switchmode technology.

PRODUCT CODING

The product coding is derived as follows, taking the IC 230-12 108 as an example.

IC	Intelligent Charger
230	230Vac input
-12	12V nominal – suitable for charging 12V lead acid batteries
108	108W capacity unit

RUGGED & COMPACT

The chargers are enclosed in a rugged, anodised aluminium extrusion protected from dust, damp and impact to IP65. The units can be installed practically anywhere, on boats or vehicles, on road and off, at depots and garages.

- 12V units are ideal for small vehicle applications such as cars, minibuses, small marine craft, caravans and motorhomes, and a variety of industrial uses.
- 24V units are ideal for heavy vehicle applications such as HGVs, fire service vehicles, larger marine craft, off road and forestry vehicles, and for use in depots and workshops.

INTELLIGENT CHARGING SYSTEM

The Alfatronix IC Series is suitable for all types of lead acid batteries. Charging is through a 3 stage system. The first stage is the bulk charging phase. This state is indicated when the yellow LED is illuminated and continues through stage 2 of the process. When the current is below 10% of maximum output, the charger automatically adjusts to reduce the output voltage to reliably top up the battery. At this stage the green LED is illuminated indicating that the battery is fully charged. Should the voltage level fall below the nominal values during the maintenance stage, the charger will go back to step one and repeat the process.

Max Load	Nominal Voltage	Part Number	Size (mm)	Weight (g)
7A	12	IC230-12 108	184 x 87 x 45	1100
3A	24	IC230-24 108	184 x 87 x 45	1100
17A	12	IC230-12 240	235 x 87 x 58	1750
12A	24	IC230-24 300	235 x 87 x 58	1750

TECHNICAL DATA

Input voltage range	180Vac - 270Vac								
Input over voltage	285Vac								
Output voltage (12V units)	13.5Vdc - 14.4Vdc according to charge cycle (STD 14.4)								
Output voltage (24V units)	26.8Vdc - 29.0Vdc according to charge cycle (STD 28.8)								
Power conversion efficiency	Typically 88 - 91%								
Off load current	<2mA								
Operating temperature	-30°C - +55°C								
Storage temperature	-55°C - +85°C								
Casework	Anodised aluminium, dust, water and impact protected to IP65								
Connections	Input - IEC lead, Output - flying lead								
Output indicators	Yellow and green LEDs according to cycle								
Mounting method	By 4 screws								
Safe area protection:	<table border="0"> <tr> <td>Over current</td> <td>Current limited to maximum ratings of each model</td> </tr> <tr> <td>Over heat</td> <td>Internal control to reduce output in over temperature situations</td> </tr> <tr> <td>Transients</td> <td>Protection both on input and output</td> </tr> <tr> <td>Catastrophic failure</td> <td>With fuse on output</td> </tr> </table>	Over current	Current limited to maximum ratings of each model	Over heat	Internal control to reduce output in over temperature situations	Transients	Protection both on input and output	Catastrophic failure	With fuse on output
Over current	Current limited to maximum ratings of each model								
Over heat	Internal control to reduce output in over temperature situations								
Transients	Protection both on input and output								
Catastrophic failure	With fuse on output								
Approvals	2004/108/EC General EMC 206/95 Low Voltage Directive 93/68/EEC CE Mark								
Designed to	EN61204-3, EN60335-2-29, EN 55022B								
Markings	CE								

HARSH ENVIRONMENTS

These products offer the same great electrical characteristics as our PowerVerter and DD Series, but are provided in "Ruggedised" casings for use in harsh environments. Using the well-known Ingress Protection System, the product range has been tested and subjected to demanding environmental conditions and awarded a rating of IP65. All Ruggedised PowerVerter are enclosed in a durable aluminium extrusion. The low mass Surface Mount Technology components are also less prone to damage from vibration and shock, further increasing the reliability of the units.

INNOVATIVE TECHNOLOGY

Utilising the same GORE-TEX® technology that is used in extreme outdoor clothing, the Ruggedised range is able to breathe freely, without compromising the water tight and dust tight seal. This free-flow of air ensures that the pressure remains equal inside and outside the unit thus allowing it to operate within a large temperature range and at varying altitudes safely.

FAST INSTALLATION

All the products fit onto a "Click 'n' Fit" mounting clip which is fixed in three points allowing it to be mounted on uneven surfaces. It is easy to fit the clip into awkward places, then simply click the unit into position.

ANTI-VIBRATION

As well as being dust and water tight to IP65, the units are vibration resistant. They have an anti-vibration cable gland fitted into a hexagonal recess to prevent unwanted knocks from loosening it, so they can be fitted into rugged environments care-free.

ADDITIONAL FEATURES

The RU range has the same features as the standard PV & DD range, but in addition, they also offer the following benefits:

- Dust, water and impact resistant to IP65.
- Breathable vent to prevent unwanted build up of pressure.
- Anti-vibration cable gland.
- Supplied with 1m of cable as standard.

PRODUCT VARIANTS

Many PowerVerter-RU and DD-RU Series products can be configured with alternative output voltages etc. for specialist applications. Please call our sales team to discuss your requirements.

Part Number	Power	Nominal Voltage	Dimensions	Weight
PV3s-RU	36W (3A) non-isolated	24Vdc input, 12Vdc output	86 x 91 x 52mm	325g
PV6s-RU	72W (6A) non-isolated	24Vdc input, 12Vdc output	108 x 91 x 52mm	370g
PV12s-RU	144W (12A) non-isolated	24Vdc input, 12Vdc output	146 x 91 x 52mm	505g
PV18s-RU	216W (18A) non-isolated	24Vdc input, 12Vdc output	186 x 91 x 52mm	820g
PV24s-RU	288W (24A) non-isolated	24Vdc input, 12Vdc output	186 x 91 x 52mm	835g
PV3i-RU	36W (3A) isolated	24Vdc input, 12Vdc output	108 x 91 x 52mm	390g
PV6i-RU	72W (6A) isolated	24Vdc input, 12Vdc output	146 x 91 x 52mm	510g
PV12i-RU	144W (12A) isolated	24Vdc input, 12Vdc output	186 x 91 x 52mm	690g
PV18i-RU	216W (18A) isolated	24Vdc input, 12Vdc output	236 x 91 x 52mm	1035g
PV24i-RU	288W (24A) isolated	24Vdc input, 12Vdc output	236 x 91 x 52mm	1050g
DDi 12-12 036-RU	36W (3A) isolated	12Vdc input, 12Vdc output	108 x 91 x 52mm	390g
DDi 24-24 072-RU	72W (3A) isolated	24Vdc input, 24Vdc output	146 x 91 x 52mm	540g
DDi 12-12 108-RU	108W (9A) isolated	12Vdc input, 12Vdc output	236 x 91 x 52mm	1050g
DDi 24-24 108-RU	108W (4.5A) isolated	24Vdc input, 24Vdc output	186 x 91 x 52mm	640g
DDi 24-24 168-RU	168W (7A) isolated	24Vdc input, 24Vdc output	236 x 91 x 52mm	880g
DD 12-24 072-RU	72W (3A) non-isolated	12Vdc input, 24Vdc output	108 x 91 x 52mm	400g
DD 12-24 168-RU	168W (7A) non-isolated	12Vdc input, 24Vdc output	186 x 91 x 52mm	740g
DD 12-24 240-RU	240W (10A) non-isolated	12Vdc input, 24Vdc output	236 x 91 x 52mm	920g
DD 12-24 400-RU	400W (16A) non-isolated	12Vdc input, 24Vdc output	221 x 125 x 74mm	2080g
DD 12-24 600-RU	600W (25A) non-isolated	12Vdc input, 24Vdc output	271 x 125 x 74mm	2340g
DD 48-12 072-RU	72W (6A) non-isolated	48Vdc input, 12Vdc output	108 x 91 x 52mm	360g
DD 48-12 108-RU	108W (9A) non-isolated	48Vdc input, 12Vdc output	146 x 91 x 52mm	460g

Other input and output voltage configurations are also available as special orders, please ask our sales team

TECHNICAL DATA

Input voltage range	12Vdc, 24Vdc or 48Vdc +/- 30%
Output voltage	13.6Vdc or 27.2Vdc +15% -20% at extremes of temperature, load, input tolerance etc.
Intermittent output power	Continuous rating +25%, taken for maximum of 2 minutes followed by 8 minutes rest
Transient voltage protection	Meets ISO7637-2 International standard for 24Vdc commercial vehicles
Electrostatic voltage protection	Meets ISO10605, ISO14982, >8kV contact, 15kV discharge
Output noise	<50mV pk-pk (100mV on 24V units) at continuous load. Meets CISPR25 and VDE0879-3
Off load current (quiescent current)	<15mA (PowerVerter), <15mA (DD Series exc. 12-24), <100mA (DD Series 12-24 units)
Power conversion efficiency	Typically: 90% for non-isolated units, 85% for isolated units
Isolation	>400Vrms between input, output and case, on isolated products only
Operating temperature	-25°C to +30°C de rate output current linearly from +30°C to 0A at +80°C
Storage temperature	-25°C to +100°C
Operating humidity	100%
Casework	Anodised aluminium, glass filled polycarbonate, dust water and impact resistance to IP65
Connections	4 wires (1m in length) stripped and tinned for individual connection
Voltage drop in 1m supplied cable	60mV per amp @ 25°C on units with output current < 18A 10mV per amp @ 25°C on units with output current ≥ 18A
Output indicator	Green LED adjacent to cable gland
Mounting method	Click 'n' fit mounting clip, fitted separately using three hole fixture (see page 24)
Safe area protection:	Over current Limited by current sensing circuit
	Over heat Limited by temperature sensing circuit
	Transients Protected by filters and rugged component selection
Catastrophic protection	Protected by internal input and output fuses
Approvals	2004/108/EC The general EMC directive 2009/19/EC & Reg 10 The automotive directive 93/68/EEC The CE marking directive
Markings	CE and E marked

'T' SHAPED MOUNTING CRADLE

Many Alfatronix products are installed using our 'T' shaped mounting cradle. This is manufactured from VO rated (self-extinguishing) glass filled polycarbonate material and exhibits excellent strength and durability characteristics. The three point design allows for flat installation, even on uneven surfaces and it is both quick and easy to install as the bracket itself can be used as a template for accurate drilling before being screwed firmly into position. The converter can be fully wired before being clipped securely onto the bracket. The clip design is entirely vibration proof and, as the body of the converter covers the screw heads, once installed it is virtually impossible for any of the screws to vibrate loose, a potential long term problem on a diesel vehicle.

This bracket is supplied as standard with all PowerVerter DC-DC converters up to 240W (24A), DD Series converters (up to 240W) and Brick in the lead AD Series mains power supplies.

DIN RAIL MOUNTING CLIP

The din rail mounting pack is sold separately as an alternative to the 'T' shaped bracket and is supplied in a pack of two. Please order part number: DIN - DIN RAIL CLIP Pack (2). These are compatible with all units supplied with a 'T' bracket (which should be discarded). For PV3s units, only one clip is sufficient. A pair of clips should be used for all other installations.

POWERTECTOR INSTALLATION METHODS

Depending on the size of the units, the PowerTector battery guards use two different mounting methods.

For any units up to 20A, it is not necessary to drill into the vehicle chassis as these small, lightweight units can be wired in place, then simply tie-wrapped in position in a similar way as an in line fuse.

Units from 40-200A use a die cast aluminium body configured with three mounting holes. These are offset slightly from the heatsink structure to allow installation onto uneven surfaces and provide for airflow beneath the unit.

'I' SHAPED MOUNTING CRADLE

This cradle is supplied as standard and used for the more powerful, heavier units from 400W upwards. Examples include DD 12-24 400, DD 12-24 600 and PV50s. It is manufactured from VO rated (self-extinguishing) glass filled polycarbonate material and exhibits excellent strength and durability characteristics. The four point design includes spacer washers to allow for flat installation, even on uneven surfaces and it is both quick and easy to install as the bracket itself can be used as a template for accurate drilling before being screwed firmly in position. The converter can be fully wired before being clipped securely onto the bracket. The clip design is entirely vibration proof and as the body of the converter covers the screw heads, once installed it is virtually impossible for any of the screws to vibrate loose, a potential long term problem on a diesel vehicle.
